1) Introduction

This document outlines the acceptance criteria and test cases for the **Synkly** project. The acceptance tests ensure that the system meets functional and non-functional requirements for the four selected scenarios for the demo.

In this document, you can find:

- Define of clear and measurable acceptance criterias for the four selected scenarios.
- Four acceptance tests based on the acceptance criteria for the four selected scenarios.
- Explanation of how each test corresponds to the acceptance criteria.

2) Acceptance Criteria

Use Case	Acceptance Criteria
User Account Creation	Users must be able to sign up securely with a username, and a password that meets the minimum length, uppercase letter, and numeric requirements.
User Login	Users must be able to log in with a valid username and password used during sign up and be redirected to the main dashboard.
Schedule Management	Authenticated users must be able to input, edit, and delete their weekly class schedules (day, start time, end time), and this data must be securely stored in Firebase Firestore.
Free Time Matching	Users must select pre defined dining venues and the system must detect overlapping free time slots and display available students

3) Acceptance Test Cases

1. User Registration Test

➤ **Objective:** Verify that users can create an account using Firebase Authentication.

➤ **Test Steps:**

1. Navigate to the registration page.
2. Enter a valid email and password that meets all complexity requirements.
3. Confirm the password by repeating it.
4. Check the box to confirm reading the KVKK and Explicit Consent Text and accepting the Terms of Use (Kullanım Şartları). *(This step is mandatory for sign-up completion.)*
5. Click the sign up button.
6. Verify that the user is redirected to the login page.
7. Verify that you can see the user in the Firebase authentication storage.

➤ **Expected Result:** The user is successfully redirected to the login page, account is successfully created and the data is stored in Firebase Authentication

2. User Login Test

➤ **Objective:** Verify that users can login to the website with their valid e-mail and password that have been used during registration and stored in Firebase.

➤ **Test Steps:**

1. Navigate to the login page.
2. Enter a valid email and password that have been stored in Firebase Authentication.
3. Click the submit button.
4. Verify that the user is redirected to the main dashboard page upon successful login.

➤ **Expected Result:** If the input e-mail and password are correct and stored in Firebase, the user can log in to the website successfully. Otherwise, the login should be unsuccessful, and an error message should be displayed.

3. Schedule Management Test

➤ **Objective:** Ensure that authenticated users can correctly add, update, and delete their weekly class schedules.

➤ **Test Steps:**

1. Log in successfully and navigate to the "My Profile" section.
2. Input a new class slot by choosing the day, start time, and end time.
3. Click the "Add Slot" button.
4. Click the "Save Schedule" button to store the schedule in Firebase.
5. Edit an existing entry's time and click "Update".
6. Delete another entry using "Delete".
7. Verify that the schedule is updated/stored in Firebase Firestore correctly.

➤ **Expected Result:** The schedule is successfully added, updated, and deleted. The final schedule data is accurately stored in Firebase Firestore.

4. Free-Time Matching Test

➤ **Objective:** Verify that the system correctly calculates and displays overlapping free time slots among the user and all other available users, based on a user-selected, pre-defined dining venue.

➤ **Test Steps:**

1. Log in and navigate to the "Find Matches" section.
2. Ensure that the user and at least one other user in the system have saved weekly schedules.
3. The user selects a venue from the pre-defined dining venues displayed by the system.
4. Click the "Find Matches" button.
5. The system queries Firebase for all users who:
 - i Have the same free time.
 - ii Selected the same venue.
6. Verify that the system displays a list of matching students who have common free time slots and selected the same venue.
7. Verify that a "Match Unavailable" message is shown if no matches are found.
8. Verify that each displayed matching student entry shows the overlapping free time slot.

➤ **Expected Result:** A list of all eligible matching students is displayed, considering the user's selected venue and common free time slots. The list must clearly include the overlapping free time slots.
